5. **Advantages of the System** 2
6. **Conclusion** 2

1.Introduction

Obtaining a driving license in Pakistan requires passing a theory test that covers traffic signs, road rules, and driving safety regulations. Many candidates fail this test due to lack of structured learning resources. DriveReady Pakistan is a web-based front-end platform designed to help candidates prepare effectively for the driving license theory test through organized learning material, interactive practice tests, and video tutorials.

2.Objectives of the Project

The main objectives of DriveReady Pakistan are to provide complete knowledge of traffic signs used in Pakistan, explain road rules in a simple and interactive manner, allow candidates to practice theory tests before appearing in the official exam, and demonstrate the use of pure front-end technologies without any backend or database.

3.Technologies Used

HTML5: Used for structuring all web pages and organizing content using semantic elements.

CSS3: Used for styling, responsive layouts, animations, and visual enhancements using Flexbox and Grid systems.

JavaScript: Used for interactivity, test logic, timers, score calculation, game modes, and localStorage-based data persistence.

4.System Features

The system includes a learning module covering warning, mandatory, and informatory traffic signs. An interactive rules section explains speed limits, safety rules, signals, and road conduct. The practice module provides Zen mode, Flashcards, Survival mode, and an Official Mock Test with real exam conditions. A video learning section offers curated driving tutorials relevant to Pakistan.

5.Advantages of the System

DriveReady Pakistan is easy to use, lightweight, and fully responsive. It does not require any server or installation and works directly in the browser. User progress is stored locally, ensuring privacy and offline usability for practice tests.

6.Conclusion

DriveReady Pakistan successfully demonstrates how a complete educational platform can be developed using only front-end technologies. The system provides effective learning and practice tools for driving license candidates in Pakistan and can be further expanded with backend support and mobile applications in the future.

How It Works

Three simple steps to get your driving license

1

Learn

Study traffic rules, road signs, and driving techniques through our comprehensive learning materials.

→

2

Practice

Take theory tests and use our 3D simulator to practice L-track and parking until you're confident.

→

3

Pass

Ace your driving test with confidence and get your license on the first attempt!

Student Success Stories

Real feedback from students who passed using DriveReady

"The 3D simulator was a game-changer! I practiced the L-track 20 times before my test and passed easily. Highly recommend to everyone!"

Essential Traffic Rules

SPEED LIMITS | SIGNALS & LIGHTS | SAFETY RULES | ROAD CONDUCT | SPECIAL ZONES

Speed Limits

Understanding speed regulations across Pakistan

1. Speed limit in populated areas is 50 kilometers per hour
2. Speed limit for Light Transport Vehicles (LTV) on motorways is 120 kilometers per hour
3. Speed limit near mosques and schools is reduced to 40 kilometers per hour for safety
4. Minimum speed limit on motorways is 65 kilometers per hour to maintain traffic flow
5. Speed limit for motor cars on highways is 120 kilometers per hour
6. National speed limit applies on roads where no specific speed limit is posted
7. In adverse weather conditions or poor visibility, you must reduce your speed significantly regardless of posted limits
8. Exceeding speed limits is strictly prohibited and can result in fines and penalties
